The secret for creating youthful & healthy-looking complexion

## BIO-FD&C Company Introduction & Core Technologies

### For healthy and beautiful human Life

Since 2005, BIO-FD&C Co., Ltd has developed bio-active recombinant proteins and growth factors using biotechnology, bio-mimetic peptides using solid phase synthesis technology, and plant stem cell materials using plant biotechnology. We are developing core materials for bio-active cosmetics and cosmeceuticals.

There is no eternal youth and health. Aging research, however, can help you keep more young and healthy. That is the reason why we, BIO-FD&C exist.

BIO-FD&C CO., Ltd. was founded in 2005, as a research and development-oriented bio-venture company, to perform innovative R&D in the area of anti-aging, treatment of skin diseases with cutting-edge bio-technologies.

We research and develop cosmetic ingredients and drug candidates, and the products include recombinant proteins, functional peptides, plant callus extracts, traditional herbal extracts, and various novel nano-biomaterials. We, also, provide functional evaluations in customers, materials to develop as services.

## Brand Mission

FILLOSHINE is a brand which is always pursuing innovation that breaks the status quo and delivers beauty through continuous anti-aging research and plant cells development. We strive to enhance the values of life standard through beauty.

Our mission is to ensure the complete satisfaction of our clients and promote maximum efficiency by manufacturing high performance cosmetics. We aim to be recognized by constantly attaining an equilibrium between beauty and well-being.

## Medical Nanomaterial Institute

In the field of biology research and development for healthy skin, We are developing world-top class research technology and new products.

- R&D in physiologically active recombinant proteins such as anti-wrinkle, whitening, antioxidant, and antibacterial activities
- R&D in biomimetic peptides as cosmetics ingredients
- R&D in plant callus as cosmetics ingredients
- R&D in cosmetics ingredients for hair
- R&D in atopic dermatitis and various skin diseases improvement cosmetics ingredients
- R&D in human stem cells and inducers

## Brand Overview

The Bioactive Growth Factors & Biomimetic Peptides for Cosmetics and Cosmeceuticals

One of the biggest reasons for skin aging is the reduction and aging of dermal fibroblasts.

Fibroblasts are the main cells of the dermis, which produce proteins that are involved in the elasticity and moisturizing of the skin, such as collagen and elastin. Decreasing these fibroblasts reduces collagen production, thinning the dermis, wrinkling, reducing elasticity and darkening skin tone.

FILLOSHINE is a combination of vital growth factors and biomimetic peptides.

It regenerates fibroblasts of the dermal layer and keratinocytes of the epidermal layer. Also it activates them to normalize the skin turnover to form young and healthy radiant skin.

Patents and Research Papers

Published Papers

- A number of our active ingredients including recombinant growth factors, plant cells and peptides have been patented.
- The number of patents are as follow :
  - > Domestic IP : 100(registered) / 8(pending)
  - > Overseas IP : 8(registered(USA, Japan, Europe)), 10(pending(Chine, India, etc.))

Intellectual Properties

- BIO-FD&C stands on strong research and development foundation since we established in 2005. Our researchers have been working on the scientific data that can ensure the efficacy of our active ingredients.
- Our R&D performance has been reflected in the Publish 105 papers. Outstanding remarks : Nature Nanotechnology (2017,06,IF:38,986), Nature Communications (2016,09 IF:12,124)

Bio-active Proteins

The skin of the body decreases the ability to produce various growth factors (proteins) when the progress of aging and pathological damage occurs. It is the core principle of cosmeceuticals and bio-cosmetics that it is necessary to maintain the healthy and vital skin condition by delaying the aging by constantly supplying essential growth factors produced outside the body through the cosmetics to the skin.

Bio-mimetic Peptides

Biomimetic peptides are low-molecular biomaterials composed of amino acids and are the next generation bio-active materials with high activity and safety. Varous peptides developed through the confusion technology with peptides and phytochemicals from BIO-FD&C Co., Ltd. are used as core materials for cosmeceuticals and bio-cosmetics based on their high safety and efficacy.

Plant Stem Cells

Plant stem cells are cells that can develop into any tissue without limited lifetime, such as animal stem cells. Plant callus cells, which have the same physiological characteristics as plant stem cells, contain various phytochemicals that are effective on human skin, and are used as core materials for bio-active cosmetics and cosmeceuticals.

Amino acid,mineral and Vitamin

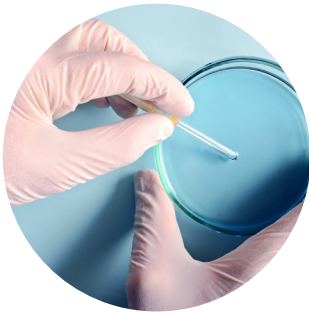

Glutathione, which is commonly known as an whitening injectable ingredient, reduces melanin pigmentation in the skin and replaces the melanin pigment that has been deposited with bright melanin to brighten the skin tone. There are nucleic acids, coenzymes, amino acids, vitamins and minerals to provide optimal environment for skin cells. Provides rich nutrients and proper pH concentration, osmotic pressure, etc, for skin cells to grow well, creating an environment where healthy skin cells can grow and grow.

Hyaluronic acid

Hyaluronic acid is contained between collagen and elastin fiber tissue of skin dermis layer. If hyaluronic acid is lacking, vacant space sinks. Hyaluronic acid can store more than 1000 times its own weight of moisture, moisture retaining ability is the most excellent moisture. Hyaluronic acid, a natural moisturizing agent, is added to the skin to make the skin shiny and elastic.

In order to overcome the permeation resistance of human skin, growth factors were developed as skin permeable type growth factors (IntoCell-Growth Factors) by fusing skin permeable peptide with natural growth factors.

### Applicable Dermatological Treatments with FILLOSHINE

1. After various laser treatments such as Laser toning, Laser resurfacing, Laser IPL, CO2 laser, Long pulse (Alexandrite, ND :YAG, etc.) laser, Q-switched ND:YAG laser, Fractional laser, New smooth-beam laser, V-Beam laser, Vivace laser, etc.
2. After various high frequency treatments : Thermage CPT, INTRAcel, etc.
3. After various ultra-sonic treatments
4. After various feeling, mesotherphy treatments and meso-roller treatments etc.

**Description**  
[상세설명 | 产品说明]

The FILLOSHINE GFP Series product contains growth factors that help normalize the metabolic cycle, regulate skin function, and promote healthy cell growth, thereby achieving growth factors to prevent aging and peptide components that help skin regeneration and strengthen skin barrier. Besides, the phyto-NEP ingredient helps to improve inflammation of aging skin and restore the skin condition. Amino acid/vitamin/mineral/ hyaluronic acid ingredients help to provide nutrients and the best growth environment for cells. This replenishes moisture, gives moisturizing experience, and makes the skin moist & healthy.

<b>Product Name</b> [제품명   产品名称]	FILLOSHINE ALA SPOT AC SOLUTION 필로샤인 알라 스팟 아르 솔루션
<b>Skin Type</b> [피부타입   皮肤类型]	Acne Skin 트러블성 피부(여드름) 痘性皮肤
<b>How to use</b> [사용방법   使用方法]	After cleansing, exfoliating and acne extrusion are performed. The penetration path of products is created intensively on the entire face or affected area through nano MTS. After applying the solution, put on a special film mask to block light and incubate for 20 to 30 minutes. (Apply the solution thicker to areas with acne and thinly to other areas.) After incubating, wipe off with a sponge or self-cleansing to remove the remaining solution on the face surface. Use the SHB645 LED light for 10 minutes. Moisturizing products and sunscreen must be applied at the finishing stage. 세안 및 각질제거 후 여드름 압출을 진행하고, 나노 MTS를 통해 얼굴 전체 또는 환부에 집중적으로 본 제품의 침투 경로를 생성해 줍니다. 솔루션 도포 후, 빛 차단을 위한 특수 마스크를 착용하고 20~30분간 인큐베이팅을 해줍니다. (여드름이 있는 부위는 솔루션을 도둡하게, 그 외 부위는 얇게 도포합니다.) 인큐베이팅 후 해면으로 닦아내거나 자가 세안을 통해 얼굴 표면에 남아있는 솔루션을 제거합니다. SHB645 LED 기기를 이용하여 10분간 광선을 조사해 줍니다. 마무리 단계에서는 반드시 보습 제품과 자외선 차단제를 도포해 줍니다. 洁面、去角质后，挤压痘痘，并通过纳米 MTS在整个面部或患部集中施针，生成产品渗透通道。涂抹产品后，带上遮光面罩阻断光线，等待20~30分钟。（涂抹产品时，痘痘部位涂厚，其他部位涂薄。）利用海绵擦拭或通过自我洁面，彻底清洁面部。使用 SHB645 LED仪器，进行10分钟光疗。收尾阶段，务必涂抹保湿产品及防晒产品。

<b>Description</b> [상세설명   产品说明]	FILLOSHINE ALA SPOT AC SOLUTION penetrates into the sebaceous glands through acne extrusion or needle passage, is converted into porphyrin and after receives Led light externally, to generate active oxygen.The principle of destroying the sebaceous glands causing acne is by using the generated free radicals. This works on the sebaceous glands of the acne area to improve acne and also prevent the transfer of acne to the surrounding sebaceous glands. It is recommended to use this product in combination with 5 wavelengths using the RW mode of the SHB645 LED device. FILLOSHINE ALA SPOT AC SOLUTION은 여드름 압출 혹은 니들 통로를 통해 피자선에 침투하여 포피린으로 변환되고 외부로부터 빛을 받아 활성산소를 생성하는데, 이렇게 생성된 활성산소를 이용하여 여드름을 일으키는 문제의 피자선을 파괴하는 원리입니다. 이는 여드름이 난 부위의 피자선에 작용하여 여드름을 개선하고 나아가 피자선도 같이 케어해주어 여드름이 주변 피자선으로 이전하는 것을 막아줍니다. 해당 제품은 SHB645 LED 기기의 RW모드를 이용하여 5가지 파장과 컴바인하여 사용하는 것을 추천드립니다. FILLOSHINE ALA SPOT AC SOLUTION通过挤压痘痘的部位或施针孔渗透到皮脂腺变成卟啉，并通过光线照射产生活性氧，由此破坏引发痘痘的皮脂腺。产品作用于患有痘痘的皮脂腺改善痘痘的同时，调节其他部位的皮脂腺，预防痘痘转移。本产品建议搭配SHB645 LED光照仪，通过RW模式照射5种不同波长的光线使用。

<b>How to use</b> [사용방법   使用方法]	After selecting the mode according to the purpose of use, Put the device probe close to the skin and use it slowly and follow accordingly to the texture of the skin excluding the eye area. The default time of usage per mode is set to 5 minutes, and VR and LED modes are optional to be used with other modes for dual or triple care respectively. 사용 용도에 따라 모드를 선택한 후, 기기 헤드를 피부에 밀착하여 눈가를 제외한 피부의 결에 따라 천천히 움직이면서 사용해 줍니다. 모드당 사용 시간은 5분으로 설정되어 있고, VR과 LED모드는 기타 모드와 듀얼 및 트리플 케어가 가능합니다. 根据使用目的选择模式后，将仪器探头紧密贴于皮肤，在眼部以外的部位按照皮肤纹理慢慢移动仪器。每种模式的使用时间自动设定为5分钟，VR和LED模式可以与其他模式进行双重或三重护理。
<b>Product Principle</b> [제품원리   产品原理]	<b>RH Massage Mode_</b> By using intermittent electric pulses, which is a type of massage function, the massager implements the acupressure massage effect and promotes microcirculation. (Recommended to use once/week) <b>UP thermal Mode_</b> RF High frequency forms a vibrating current to resonately rotate cell molecules at a rate of millions of times per second to form heat and stimulate collagen tissue to promote collagen contraction and collagen synthesis in fibroblasts. (Recommended to use once/week) <b>EMS Elasticity Mode_</b> Uses a micro-current to stimulate muscles and lymph, contract muscles to eliminate swelling and gives a tightening effect. (Available daily) <b>4 LED modes_</b> By controlling the wavelength and energy of light, it creates different light therapy effects on the skin. (Available daily) <b>VR vibration mode_</b> High frequency vibration massages the skin and promotes microcirculation (Available daily) RH 마사지 모드_ 마사지 기능의 일종인 간헐식 전기 펄스를 이용하여 마사지의 지압 마사지 효과를 구현하고 미세 순환을 촉진합니다. (1회/주 사용 권장) UP 온열 모드_ RF 고주파는 진동하는 전류를 형성하여 세포분자를 초당 수백만회의 속도로 공진화시켜 열을 형성하고 콜라겐 조직을 자극하여 콜라겐 수축 및 섬유아세포의 콜라겐 합성을 촉진합니다. (1회/주 사용 권장) EMS 탄력 모드_ 미세전류를 이용해 근육과 림프에 자극을 주고 근육을 수축 및 이완시켜 부종을 제거하고 단단하게 잡아줍니다. (매일 사용 가능) LED 4종 모드_ 빛의 파장과 에너지를 조절하여 다양한 광선 테라피 효과를 냅니다. (매일 사용 가능) VR 진동 모드_ 고주파 진동으로 피부를 마사지하고 미세순환을 촉진합니다. (매일 사용 가능) RH 按摩模式_ 利用间歇式电脉冲（属于按摩功能），实现按摩师的指压按摩效果，促进微循环。（建议使用周期，1次/周） UP 温热模式_ RF射频形成振动的电流，使细胞分子以每秒数百万次的速度共振旋转形成热量，刺激胶原蛋白组织，促进胶原蛋白收缩及成纤维细胞合成胶原蛋白。（建议使用周期，1次/周） EMS 紧肤模式_ 利用微电流刺激肌肉和淋巴，收缩并舒缓肌肉，消肿、提拉紧肤。（可每日使用） LED 彩光模式_ 通过控制光的波长和能量，在皮肤上产生多种光学疗效。（可每日使用） VR 振动模式_ 通过高频率的振动按摩皮肤，促进微循环。（可每日使用）

## Plasma Rejuvenation with RF

ANTI BACTERIA / Sterilization  
 MOSITURIZER / Maximize drug delivery  
 DRY SKIN BECOME HEALTHY / Dramatic absorption  
 SKIN WHITENING / Toning effect  
 SKIN LIFTING / Wrinkle care  
 28DAYS HEALTHY TURN OVER / Skin regeneration & rejuvenation

CelloPlarf is an advanced aesthetic device combining 4 types of technology, Plasma, Micro Needle RF, Fractional RF and EMS technology within one device for an all-rounded and effective anti-aging and anti-acne experience.

Plasma technology gives immediate effect and generating large amount of collagen and elastin to rebuild the damaged skin reducing wrinkles, lifting effect and shrinking pores. It helps push nutrients and genes into the tissue as the plasma breaks the cell adhesive molecules temporarily enabling the nutrients to be absorbed at an amazing rate.

RF Needle destroys hyperactive sebaceous glands and targets the root problem of acne. The upper part of the needle is insulated so that RF does not create damage to the surface of the skin. The lower part of the needle delivers precise amount of RF energy to destroy sebaceous glands permanently.

Fractional RF uses minimally invasive gold plated micro-needles to deliver precisely controlled RF energy directly into the deeper layers of the dermis avoiding damage to the skin surface. This produces a fractionated denaturing of dermal tissue inducing new collagen production, tightening elastin fibres and increasing lymphatic flow.

## What is Plasma?

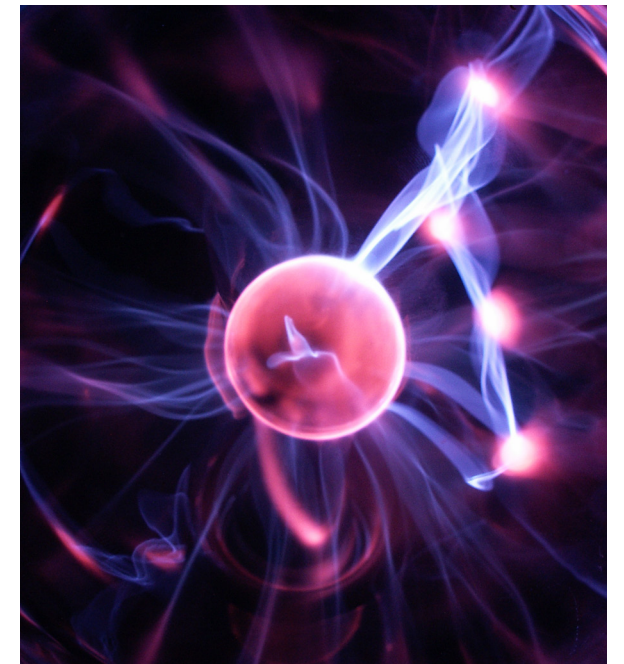

Plasma is the fourth state of matter following the state of solid, liquid and gas whereby the gaseous state has been ionized by the high temperature and high electricity in everyday environment. The universe is consisted of 99,999% plasma.

## How Plasma works in the Skin?

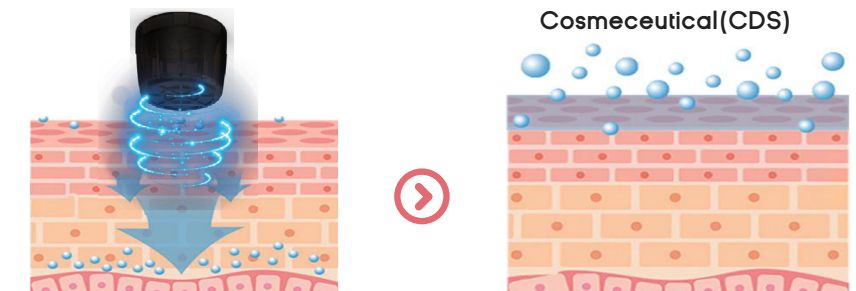

Plasma, which is an ionized gas that has an electrical energy, works throughout the surface of the skin to the level of epidermis.

As the electrical energy flows from the external to the internal, its intensity changes with its flow and induces different effects on different parts of the skin (refer to the diagram)

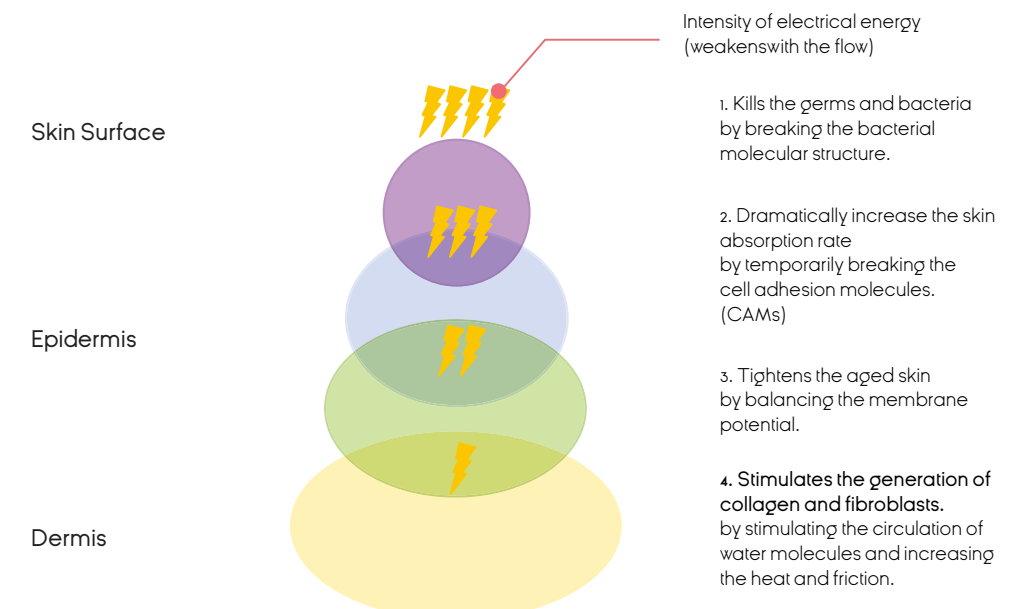

Unlike any medical laser, it does not damage skin too much, blood or epidermal tissue, while having an outstanding effect on skin disease treatment, sterilization, absorption, skin regeneration, anti-pigmentation and increasing skin elasticity.

# ULTRA TONING

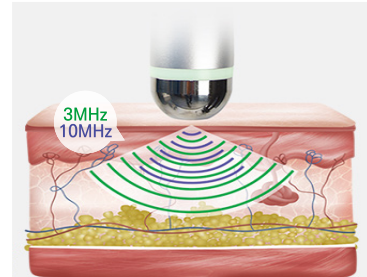

Improvement of skin by generating multiple frequency-modulated ultrasonic waves

Dual-frequency cross-probing generates pressure changes that affect connective tissue and cell structure

| 1/3 MHz

| 3/10 MHz

Penetration depth of deep dermal layer

BODY 1/3MHz : Dermis about 4.0-30mm

Penetration depth of epidermis and dermis

FACE 3/10MHz : Dermis about 0.5-4.0mm

## 4.0MHz RF intensive care for

Collagen layer that loses elasticity in the dermis creates wrinkles on the skin

The high frequency RF of 4MHz increases heat from 39°C to 45°C

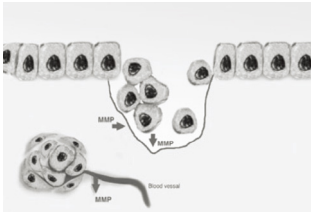

New Collagen and Elastin Generation

4.0MHz RF treatment increases the synergistic effect between 4MHz radio frequency after ultrasonic treatment, and due to the thermal energy effect of the dermis layer in the skin, it becomes collagen stimulation, wrinkle improving effect and up to 90 days by providing skin elasticity effect

## Ultra Toning KeyPoint

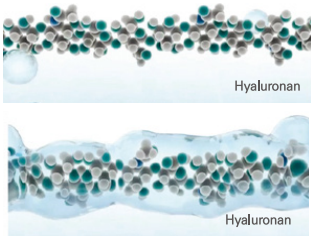

### DOWN Matrix Metalloproteinase

- Reduces damage UV exposure & skin inflammation and skin irritation
- Improves skin elasticity, increases skin turgor, reduces skin sensitivity
- Prevents collagen breakdown & epithelial destruction

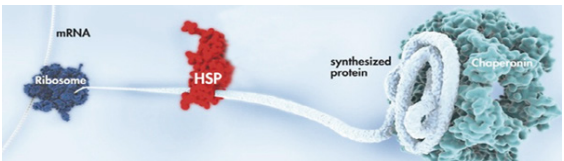

### UP Glycosaminoglycan

- The moisturizing factor GAG ability to bind water in the thickness of the skin 1000 times more efficiently than our body
- GAG is a large class of ingredients, which also includes the hyaluronic acid
- Reducing GAG leads to skin problems such as dry skin, loss of elasticity

### UP Heat Shock Protein

- HSP is an important factor in skin repair and skin aging prevention
- HSP is important in the restoration of skin cells that have lost strength due to ultraviolet rays and external influences
- Proteins are essential for the normal functioning of substances such as cells and collagen

# FILLOSHINE SHB645 LED LIGHT

FILLOSHINE SHB645 LED LIGHT is equipped with 1632 SLDs (medical LEDs), which have higher power and energy than ordinary LEDs and have more light sources, which is conducive to gathering energy. It also has the functions of cooling down by Cold-air, adjustable time, and adjustable brightness. It can be used on various parts of the face, body, scalp, etc. with suitable products and procedures. It works effectively on anti-inflammatory, minimizes skin irritations, enhances skin regeneration, prevents and educes acne.

Photodynamic Therapy (PDT) is to apply a photosensitizer that reacts with light and is selectively absorbed by the epidermis and sebaceous glands to the local skin, and uses the photosensitive oxidation reaction produced by irradiation of specific wavelengths of light for treatment. It is mainly used to treat the epidermis Cancer, facial sores, folliculitis, acne, etc.

The Methyl ALA component contained in the photosensitizer FILLOSHINE ALA SPOT AC SOLUTION is oil-soluble and will dissolve in the sebaceous glands over time after application. Apply photosensitizer to the acne-prone areas and apply a special light-blocking mask to promote the penetration of the photosensitizer into the sebaceous glands. After 20 minutes, wipe off the remaining photosensitizer on the skin surface. The CW mode of the FILLOSHINE SHB645 LED LIGHT, which emits ultraviolet, visible light, and infrared rays, is used to simultaneously illuminate 5 kinds of light with different functions to maximize the effect of the treatment and reduce side effects such as darkening. The irradiated light acts on the photosensitizer absorbed by the skin to produce a photosensitivity reaction, and the principle is used to improve acne.

ALA photodynamic therapy is a certified treatment method which is not only widely used to treat acne, but also used to treat seborrheic keratosis, skin cancer, etc. The most important thing in the therapy is the light and irradiation time of the LED and according to the brightness to achieve the effect of penetrating the sebaceous glands. Set a treatment cycle for 4 to 8 sessions, which can reduce and prevent acne, brighten skin tone and other effects.

FILLOSHINE's SHB645 LED LIGHT is recommended to be used with ALA SPOT AC SOLUTIONG and AC KIT PRO (acne skin, oily skin, combination skin) products to achieve the most effective effect of improving acne skin condition.
